

Toilet Cistern Installation Instruction

Please find the cistern bolts as the following, and separate it into 3 parts (A, B, C) as the picture:

1. Insert the part B into the toilet pan holes. (as the photo)

2. Use the part C including washer and tighten securely (under the pan) to the part B.

3. Put the cistern onto the pan and make sure it is in a right position, the bottom 2 holes are matching with the part B. Adjust the pan and cistern to line up if required.
4. Use a screw driver (or a drill at slow speed) to tighten the part A through the cistern into the part B. Please keep the cistern balanced during the process. Overtightening can cause crack in the tank. **(Note: watertight silicone can be used under part A to reduce possible leak if required.)**

Toilet Seat installation Instruction

1. Please separate the black rubbers from the screw.
2. Insert the rubbers into the pan holes. Put the screw with the white bracket on the pan and screw into the rubber (do not tighten).
3. Push the seat (press and hold the chrome button inside the seat) onto the metal pin(on the white bracket), and adjust the pin position to make sure the seat is in a right position. Then take off the seat and tighten the screws to secure the brackets.
4. Put the metal cover onto the brackets, and the seat.
